SUBJECT INDEX

Above threshold ionization ("ATI") 8, 11, 30, 32, 37, 45–63
Aharonov–Bohm effect 5
Aharonov–Bohm flux 299, 304
Auger recombination 108
  also see Photon rate equations, electrical threshold

Backward-wave oscillators *see* Waveguides, slow-wave structures
Bloch oscillations 253, 259
Bose commutation relations 173
Brillouin zone, mini 251

Casimir effect 137
Cellular automata 311
Černenkov radiation 142
Charge-density waves 251
Commutation relations, time-dependent 181
Coulomb blockade 272, 273

Dirac matrix equation 15–18, 22

Effective mass
  mass reversal 84
  strain effects 84, 114
Einstein B coefficient 99, 102
Electron-beam lithography 256

Fermi surface area 258
Ferroelectricity in coupled quantum dots *see* Superlattices, quantum dots
Feynman diagram techniques 15, 32
Fibre optics 73
Floquet problem 65
Fluorescence, modified resonance 138
Fractal
  Hofstadter butterfly 260
  superlattice fractal theory 284, 287
Gauge transformation 20–23, 23–24
  Coulomb gauge, plane-wave laser field 20, 26, 28
  gauge invariance 20, 22
  length gauge 26, 28, 43
  velocity gauge 26
Göppert–Mayer gauge *see* Gauge transformation, length gauge
Gordon–Volkov solution 26, 27–30, 32, 34, 37, 43, 44, 51, 63
Gunn effect 252

Hall effects: superlattices *see* Magnetic field effects
Harper's equation 304, 308
Heisenberg equations of motion 149

Interferometry 136, 141
Ionization
  above threshold ionization ("ATI") 8, 11, 30, 32, 37, 45–63
    polarization 45, 47, 49
  ionization from Rydberg states 62
  multiphoton ionization 12, 25, 39
  sequential ionization 39

Jaynes–Cummings model 139
Josephson junctions 259

Keldysh–Faisal–Reiss ("KFR") theories 6, 9, 25–63
Keldysh-like theories *see* S-matrix
Klein–Gordon equation 15, 19–21, 28, 33
Kramers–Henneberger transformation 8, 25, 26, 44, 52, 57
Kronecker delta 19

Langevin equations 140, 164
Laser
  amplifier 82
  characterisation 89–94
  electrical confinement factor 109
  emission frequency: strained/unstrained quantum wells 86–94
  "grin" lasers 108, 115, 118
  high-speed response 76
  injection level wave modes 79
  linewidth, optical 127, 129
  mass reversal *see* separate entry
  mode hop 131
  micro cavity lasers 76
  mode suppression ratio 126
  photon ration equation *see* separate entry
  power transmission 84, 109
  quantum well 73
    also see quantum well
  saturated amplifier 82
    amplifier gain 82
  spontaneous emission 79
  stimulated photon wave mode 79
    lifetime 80
  vertical cavity
    temperature dependence 76, 120
Lasers
  CO_2 4, 8, 10
  excimer laser 8, 10
  Nd laser 8, 10
  noise 141
  quantum electrodynamic approach 135, 175
  short laser pulse assumptions 40
  spontaneous emission 138, 141
  stimulated emission 139
Linear accelerators *see* Waveguides, slow-wave structures

Linewidth, optical
  mode hop 131
  Schawlow–Townes formula 129
Lippmann fringes 143
Luttinger–Kohn parameters 84

Magnetic field effects on lateral superlattices 254
  Aharonov–Bohm flux 299
  cyclotron orbits 256
  Hall effects 280, 287
    Hall voltages 304
  harmonic oscillator potential 268
  large magnetic fields 280–289
  low magnetic fields 289–309
  magnetotransport 251, 259–280
  variations with gate voltage 285
Markovian relaxation theory 137
Mass reversal 84
Material electrical property testing, microwave 228
Micromaser 139
Microwave cavity, superconducting 139
Microwave cavity perturbation method 228–230
Microwave circuit
  low frequency theory 189
  passive 189
Microwave filters 223–228
  dissimilar waveguide sizes 225
Microwave propagation method 228
Microwave strong field 8, 9
Minkowski space 16
Mode suppression ratio 120
Møller wave operators 13
Multiphoton absorption 11
  ionization 12, 25, 39
Molecular-beam epitaxial growth 251
Monte Carlo technique 256

"Negative mass" prediction 251

Optical cavity
  dielectric effects 141, 145, 174
  input–output theory 140, 148, 155
  passive, lossless systems 143
  photon flight time 161
  quantum electrodynamics 135, 155
  quantum noise theory 140
  wall effects 137
Optical communications 136
Optical resonators
  cavity wall 136
  experimental considerations 136
  fractionally transparent mirrors 175
  light squeezing 135, 139, 140
  photon antibunching 135
  spectral filtering 143
  sub-Poisson's photon statistics 135, 139
  also see Radiation fields
Opto-electronic devices 73

Peak suppression 37
Peierl's substitution 302
  Peierl's instability 310
Persistent photoconductivity effect, superlattices 289
Perturbation theory 2, 3, 24, 45
  waveguides 184
Petermann K factor 176
Phase transformation 21–23, 23–24
Photodetachment, strong-field *see* Strong-field approximation (SFA), photoionization
Photon rate equations 76, 77, 79, 94, 104
  confinement factor 109, 118
  diffusion, electron/hole 108
  Einstein's coefficients for absorption 76
  electrical threshold 76, 80, 98, 109
    recomination, electron/hole 108
  Fermi-level representation 76
    K-selection 77
  laser cavity gain 81
  material contamination effects 113
  optical threshold 76, 79, 87, 98, 100
  photon lifetime 84
  spontaneous emission 76, 79
  stimulated emission 76, 79
  threshold current 109, 111, 114
    temperature dependence 118
  wave mode 79, 80
    power 84, 109

Quantum electrodynamics
  optical resonators 135, 155
  optical response functions 143
  spatially varying dielectric 135, 174
Quantum optics
  atomic binding potential 18
  bound state intensity parameter 6
  free-electron intensity parameter 7
  free electron motion 7
  non-perturbative intensity parameter 5–6, 8
  pondermotive potential 5
  strong field environment 2
Quantum potential barrier *see* Waveguides
Quantum wells
  coupled 251
  also see Superlattices, lateral
Quantum well laser 73
  charge density 85
  energy momentum diagram 78
  "energy transparency" 111
  hole mass 74, 83
  mode suppression ration 120
  multi quantum well laser 76
  quasi-fermi level relationships 85, 86, 111
  strain effects on mass 84
  strained 74, 86, 88, 97, 112
  unstrained 86, 87, 97–106, 111
  also see Laser and photon rate equation
Quantum wires *see* Superlattices, lateral

Rabi oscillations 139
Radiation fields
  correlation junctions 152, 166, 170

Heisenberg motion equations 149
mode decompositions 148
multi-mode radiation field operators 159
optical resonator
external 136, 164
internal 136, 155, 160
quasimodes 143
spatially varying dielectric 145, 155
time dependence
free field operator 151
source-quantity operator 151
Raman scattering 138

Schawlow–Townes formula 176
Schrödinger equation 4–5, 34
gauge transformations *see* separate entry
Semiconductor laser materials
GaAs/InGaAs/AlGaAs 76, 97, 103, 113, 114, 124, 129, 131
In–GaAs P/InP 76, 85, 97, 115
Shubnikov–de Haas measurements 252, 263, 280, 289
Slow-wave structures *see* Waveguides
S-matrix 1–68, 12, 24, 34–37
analytic S-matrix 13
atomic binding potential 18
Dirac equation 15–19, 31–33, 37, 59
experimental details 37, 39, 42, 45–63
gauge transformation *see* separate entry
Keldysh-like theories
Gordon-Volkov solution *see* separate entry
Keldysh–Faisal–Reiss ("KFR") theories 6, 9, 25–63
one-dimensional method 65
tunneling theories 27, 41, 42
validity of approximations 63
non-relativistic case 13–15, 22, 23,–24, 29, 33, 54, 60
one-dimensional behavior 65
phase transformation *see* separate entry
relativistic case 15–21, 21–23, 31, 33, 37, 43, 58
strong field approximation ("SFA") *see* separate entry
Spontaneous emission 137
Stabilization (strong field effect) 8, 12, 41, 52–58
Strain, quantum well *see* Quantum wells and Effective mass
Strong field approximation (SFA) 9, 11–12, 30, 32, 34, 44
atomic properties 38–39
experimental details 40, 42, 45–63
limiting procedures 33
monochromatic 34, 39
tunneling limit 41
one-dimensional model 65
photoionization 12, 26, 30, 33, 39, 45–63
very-strong-field applications 62
Stub tuner (screw) *see* Waveguides, discontinuity types
Superlattices
negative magnetoresistance 283
quantum dots 266–280
coupling between 276
ferroelectricity 310
"Hartree" term 276
instabilities 309
lateral gate structure 271
magnetoplasma effects 276
quantum Hall regime 276, 280
spectroscopy 272
Superlattices, lateral 251–311

magnetotransport *see* Magnetic effects
Mesfet-type structures 305, 306
minibands 251
population inversions 310
quantum dot 285
minigaps 251
negative differential conductance 251
negative differential resistance 252, 289
periodic potential 255
PMMA resist 256
quantum wires 261–265
experimental results 263–265
tunneling 265, 310
quenching 256
Si mosfet 252
growth of 252
single or double electron charging in quantum dots 286
synergetic switching of potential 310
weak potential modulation 289
"Superluminescence region" 126
Synergetic switching phenomena *see* Superlattices

Telecommunications network 73
Theoretical methods
dipole approximation 10–11, 29–30
Feynman diagram techniques 15
group theoretical approach 18
one-dimensional model 65
strong field approximations *see* separate entry
Szöke method 51–52
wick theorem 15
also see S-matrix
Time coarse-graining approximation 143
Travelling-wavetubes *see* Waveguides, slow wave structures
Threshold, optical, electrical and current *see* Photon rate equations

Van Hove singularities, density states 258, 280

Waveguides 183–247
Born approximation 238
cavity mediums 192
effective refractive index 192

loss-less dielectric 197
corrugated walls 217
"cross-section" 184
cross-section dimensions 189
dielectric-slab-loaded rectangular waveguide 193
de Broglie relation 192
Dirac-type equation 184, 240
discontinuities (macroscopic objects) 190, 199–217
equivalent lumped circuit 201
impedances 200
reflection coefficient 200
transmission coefficient 200
transmission line theory 201
discontinuity types
capacitive post 206
circular aperture 211
inductive thin circular post 209
screwtuner 206
thin metallic diaphragm 201
empty spherical cavity 230
photon diffraction 235
photon scattering 233
homogeneously filled waveguides 197–199
inhomogeneously filled waveguides 192–197
Klein–Gordon type equation for wave propagation 184, 236–238
Maxwell equations 185–189
microwave cavity perturbation method *see* separate entry
microwave filter *see* separate entry
microwave low frequency theory 189
parallelipipedical microwave cavity 228
photon refraction law 192
power transmission factor 184, 238
quantum potential barrier 184, 190–192, 203
"scattered" wave amplitude 239
slow-wave structures 217
pass-band 218, 219
stop-band 218, 219
vector potential operator 242
Weiss oscillations 290
Beenakker's theory 292
temperature effects 293
Wigner formulation 252
